DESCALES COOLING SYSTEMS AND BOILER WHILE UNDERWAY

PHYSICAL DATA

Appearance: Liquid clear pale yellows
Density: 1.08
Ph 1% solution: 10.5
Flash Point: None.
Specific gravity: 1

DESCRIPTION

Slightly alkaline liquid compound containing sequestering agents. Non toxic, safe to use on all common metals and standard gaskets.

APPLICATIONS

Descaling of boilers and diesel engine cooling systems while in service.
The use of SCALE SEQUESTRANT reduces water hardness, its descaling properties allow to clean the circuits slowly time to time in order not to support direct scale block removal.

DOSAGE

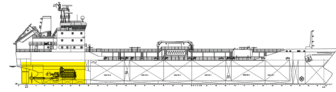

- **For boiler cleaning:** dose SCALE SEQUESTRANT at the rate of 1 litre per ton of water for at least 30 days, if necessary extend the treatment for another 30 days, at half dosage rate. For better result use in addition LIQUID COAGULANT at rate of 0.5 litre per ton of water with blowdown every 24 hrs, after dosing SCALE SEQUESTRANT. During this period the P. alkalinity value should be keep at standard limits, using B.W.T. ONE SHOT and/or ALKALINITY CONTROL.
- **Cleaning of diesel engine cooling system:** Dose SCALE SEQUESTRANT at the rate of 2 litres per ton of water in the system; on following days add 1 litre of product every 5 tons of water.

Do no stop the normal treatment of N.C.L.T. keeping nitrite level between 1500 and 2000 PPM, blow down once a day at least 200-300 litres of water from the lowest spot of the circuit when operating the pH has to be between 8,5/9,5 adjusting with ALKALINITY CONTROL.

NATURE OF SPECIAL RISKS

Alkaline solution. Avoid contact with eyes and prolonged or repeated contact with skin, may cause irritation.

SCALE SEQUESTRANT
